

SendGrid :

Step 1 : Login to the sendgrid account which is created.

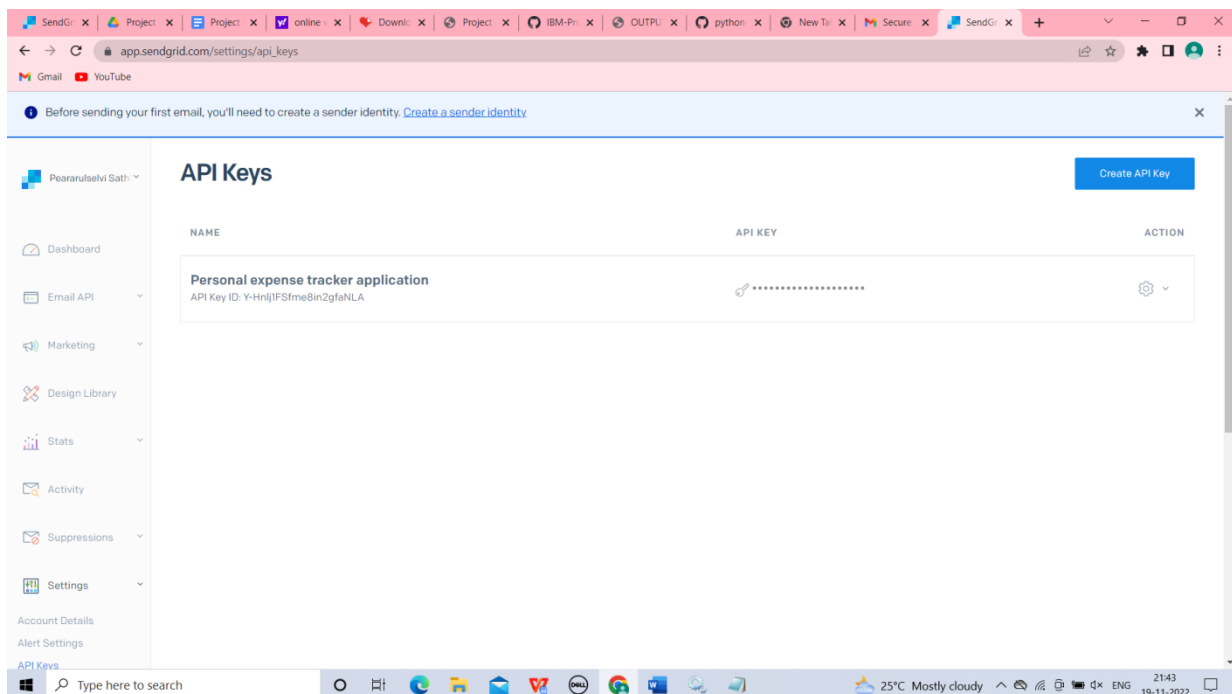

Step 2: Goto the settings and click API key

Step 3 : Create the API key and copy it

Step 4 : once you created press done

Step 5: Create single sender and fill the requirements

The screenshot shows the SendGrid dashboard for user 'Peararulsevi Sath'. The main heading is 'Welcome, Peararulsevi!'. Below it, a blue banner reads 'Send your first emails with Twilio SendGrid'. The 'Create a sender identity' section explains that a sender identity is the 'from' email address and provides two options: 'Create a Single Sender' (highlighted) and 'Authenticate a domain instead'. A diagram shows an email from 'Your Business' with the address 'jane.doe@your_business.com'. At the bottom, a 'Send your first email' section prompts the user to create a sender identity first. The left sidebar contains navigation links for Dashboard, Email API, Marketing, Design Library, Stats, Activity, Suppressions, and Settings. The bottom status bar shows a 100% reputation and the date 19-11-2022.

Step 6: put the sender and receiver email

The screenshot shows the 'Single Sender Verification' page in the SendGrid dashboard. A 'Create New Sender' button is in the top right. Below the heading, a table lists the verified sender information:

SENDERS	ADDRESS	NICKNAME	VERIFIED	ACTIONS
Peararulsevi FROM: speararul@gmail.com REPLY: vijthrap7@gmail.com	AAMEC Kovilvenni Kovilvenni Tiruvapur, IND	selvi		

The left sidebar is identical to the previous screenshot. The bottom status bar shows the date 19-11-2022.

Sendemail.py

```
import smtplib
import sendgrid
import os
from sendgrid.helpers.mail import Mail, Email, To, Content
SUBJECT = "Interview Call"
s = smtplib.SMTP('smtp.gmail.com', 587)

def sendmail(TEXT,email):
    print("sorry we cant process your candidature")
    s = smtplib.SMTP('smtp.gmail.com', 587)
    s.starttls()
    s.login("il.pradeepthi@gmail.com", "oms@1Ram")
    message = 'Subject: {} \n\n {}'.format(SUBJECT, TEXT)
    s.sendmail("il.pradeepthi@gmail.com", email, message)
    s.quit()

def sendgridmail(user,TEXT):
    sg = sendgrid.SendGridAPIClient("SG.Y-
Hnjl1FSfme8in2gfaNLA.91EtYNMe8qegWhptw1pecREhnVez9L9yPu58Q1bjO4M")
    from_email = Email("speararul@gmail.com") # Change to your verified sender
    to_email = To("vijithrap7@gmail.com") # Change to your recipient
    subject = "Sending with SendGrid is Fun"
    content = Content("text/plain",TEXT)
    mail = Mail(from_email, to_email, subject, content)

    # Get a JSON-ready representation of the Mail object
    mail_json = mail.get()
    # Send an HTTP POST request to /mail/send
    response = sg.client.mail.send.post(request_body=mail_json)
    print(response.status_code)
    print(response.headers)
```

Output :
